Web Hosting - A Beginners Guide

In diabetic individuals, long-standing hyperglycemia leads to chronic renal vasodilatation, glomerular hyperfiltration, cellular injury, glomerulosclerosis, mesangial proliferation, and, finally, proteinuria and uremia Hypertension, almost universal in persons with type 2 diabetes, accelerates this process Many individuals with type 1 and type 2 diabetes have higher renal blood flow and glomerular filtration rates and lower renal vascular resistance than nondiabetic individuals Only one-third of diabetic individuals develop nephropathy, and it is likely that those that do have a genetic predisposition for this condition Hyperfiltration may be an early indicator that diabetic individuals are at high risk of developing nephropathy Several investigators - have examined the hemodynamic responses of diabetic individuals to various types of protein meals. This word is about action, breaking the norm, and thinking big.
